When one-bit URG 525 is used, it indicates that the 32-bit ~~bit~~ urgent pointer field 565 is valid. As mentioned before, when one-bit ACK 530 is set, the 32-bit acknowledgement number 515 is valid. One-bit PSH 535 is used to instruct the receiver to pass the data received thus far immediately to the receiving application. RST 540 is used to tell the receiver to re-establish connection. This usually indicates that an error condition has been detected. SYN bit 545 synchronizes the sequence numbers to begin a connection and FIN bit 550 indicates that the sender has sent all data in a stream. If both ends of a communication have sent the FIN flag, the connection will be closed.
